

All about rivers!

What do we know about rivers?

We will find out what the different parts of a river are called and label them. We will then learn who uses rivers and find what the main uses of a river are. We will look at dams and flooding and also what happens when rivers become polluted.

Where are the most famous rivers?

We will work with friends using computers and information books to research whereabouts the most famous rivers are located. We will find facts about the different rivers and display our findings to the rest of the class.

Let's get arty!

We will be doing our own detailed sketches of rivers as well as making models of the riverbank from card. The models will show how rivers produce natural landmarks.

Let's listen and perform some groovy tracks!

In music, we will be listening to and learning to sing songs by The Jackson 5 and Michael Jackson. We will also play instruments along with the music.

Science

In Science we will learn all about the water cycle. We will look at the different parts of the cycle and make our own using cups, compost and water. We will also find out what happens when we age and look at the different stages in our lives.
